INTRODUCTION

WE are pleased to present to you our price list of material revised to date. Our plan of cataloguing is, with a few exceptions, the same as we have used for many years.

A description of grades will be found commencing on page 5. Illustrations of our several models will be found on pages 11 to 18 inclusive. Commencing on page 136 will be found serial numbers and grades, with classification and other description, which arrangement is the key to our system of cataloguing. As an example: A third wheel and pinion is wanted for movement No. 11,819,001. Consult numbers commencing on page 136, and it will be found that this movement is Grade 349, Class 65, 18 Size, Full Plate. Now consult index in back part of price list, which indicates that third wheels and pinions are listed on page 126. Under the proper heading Class 65 will be found, and preceding it the catalogue number. The full description given is: No. 1091, Class 7 to 9, 65, 66, 120, 121, price per piece 50 cents, per dozen, \$6.00; 18 size, Full Plate, 5th, 7th, and 11th Models, Quick Train, Flat, Gilded, with 75 teeth in wheel and 10 in pinion. In ordering, specify catalogue number and class, which in this instance are No. 1091, Class 65. Comparing the wheel and pinion to be replaced with illustration No. 1091, it will be found to be the same shape.

In some instances improvements have been made in old grades. An example of this kind would be the changing of escapement in Grade 149 from a single to a double roller. The staff suitable for this movement, as originally made, is No. 857. The staff suitable for use with double roller is No. 2516. As both staffs are used in several grades coming under the head of Class 1, it will be necessary in ordering to determine which kind is wanted by a comparison with illustration.

That there may be no doubt as to what "Class" means as applied to grades of movements, we will say that all grades of a particular size and model that require material of same quality are classed together. In 18 size there are nine grades of movements which are Class 1. When different classes of movements require the same kind of material, the classes are grouped.

In a number of instances we have found it impractical to classify material as in our general plan. Examples of this kind are Clicks, Ratchet Wheels, and Main Wheels used in watches having these pieces exposed. As several styles of finish have been used in grades coming under the same class, we now list these parts in several general divisions. In each of these divisions are noted the chief features of the finishes embraced by them, which serves, in a general way, as a guide for ordering.

In some instances more than one number is applied to the same illustration. The reason for this is that a difference exists which cannot be shown by an illustration. These differences are made clear in the text following illustration numbers.

We particularly call attention to Notes and Tables in different parts of the Catalogue, which will be found very helpful in making correct selections of material.

On page 18 will be found Classes of Material and Grades of Movements to which they are applied.

Respectfully yours,

ELGIN NATIONAL WATCH CO.

MAY, 1915.

*These arbors are made to fit pallet friction tight. In many of the classes both screw and friction arbors have been used and care should be taken to give correct number.

Screw Pallet Arbors with two different diameters of threads have been used in 16 Size, Class 31—Nos. 214 and 215 have large diameter, and 2309 small diameter. In 0 size, classes 77 and 81, No. 1723 has large diameter thread and 2312 small.

†Thick Barrel for 1720 Spring.

‡Thin Barrel for 2339 Spring.

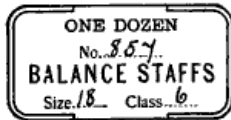

*Stop Works are used on Barrels, Illustration No. 264, Class 1, 2 and 7; No. 267, Class 1, 7 and 65; No. 276 Class 16, 21, 36 and 41.

Observe that 18 size Hunting Movements are made both Quick Train, with 78 teeth, and Slow Train, with 60 teeth in Barrel, and in order that there may be no mistake, care should be taken to compare number of teeth in Barrel to be replaced with the number given in Catalogue.

When ordering a new Barrel, the Barrel Arbor for same should be sent, that we may properly fit Barrel to Arbor.

Note: Barrels and Arbors fitted will be supplied if desired. The price is the combined list price for Barrel and Barrel Arbor with an addition of \$1.00 per dozen or 10 cents each for fitting.

Your Jobber will supply Balance Staffs, Balance Jewels, Roller Jewels, Hands and Screws in Dozen lots in original Sealed Trade Marked Packages.

It will be observed that in some instances more than one number is applied to the same illustration. The reason for this is that a difference exists which cannot be shown by an illustration. This difference is usually explained in the description following the catalogue number.

CLAMPS, RATCHET WHEEL
 USED WITH EXPOSED WINDING WHEELS

Owing to the many different styles of finish on the ratchet wheel clamps of our exposed winding wheel models, it has become necessary to abandon the previous system of classifying them.

We now list them in three general divisions. In each of these divisions are noted the chief features of the finishes embraced by them which serves in a general way as a guide for ordering.

Catalogue No.	PRICE		DESCRIPTION OF MOVEMENT			In ordering, specify letter in addition to catalogue number.
	Piece	Per Doz.	Size	Model		
1792	.25	2.50	18	¾ Pl.	8th 7th, 13th, 15th 2d, 3d	A.—Circular rayed—or polished, with corners beveled and polished.

CLICKS

USED WITH EXPOSED WINDING WHEELS

Owing to the many different styles of finish on the clicks of our exposed winding wheel models, it has become necessary to abandon the previous system of classifying them.

We now list them in three general divisions. In each of these divisions are noted the chief features of the finishes embraced by them which serves in a general way as a guide for ordering.

Catalogue No.	PRICE		DESCRIPTION OF MOVEMENT		In ordering, specify letter in addition to catalogue number.	
	Piece	Per Doz.	Size	Model		
1801	.45	4.50	18	3/4 Pl.	8th, 9th	A.—Circular raying with cupped center polished.
1316	"	"	16	"	6th, 7th

Enamel dials, regular quality, will be supplied with letters of a name in place of regular figures at \$2.00 each in advance of the list price.

NOTES

Under illustrations of dials commencing with page 38 the various sizes are given in which that particular style is furnished. Illustrations are intended to give an idea of the general style of hours only and not the size.

When ordering dials in addition to the catalogue number it is necessary to give the size, quality, style and model. As an illustration "No. D29, 18 size glass enamel double sunk 8th and 9th model."

Double sunk dials are made only in enamel and furnished only for 18 and 16 size movements.

Dials for 16 Size, Classes 16, 21, 27 and 28, are fitted in a Dial Ring, and are not furnished separate from the ring; an extra charge is made of \$6.00 per dozen for this style. Classes 27 and 28 have no Second Bits, being for Sweep Second Movements.

In order to assist in determining the models of Movements for which Dials are required, commencing on page 43, is shown the exact location the dial feet bear as relates the twelfth hour in all our various sizes and models.

Metal dials are made gold plated and silver plated. When ordering specify which is wanted. Continuous minute figure dial illustration No. D155 will be supplied plain or with center circle as in illustration. When ordering specify plain or center circle.

FANCY DIALS

Fancy Arabic

Fancy Roman

These dials are decorated in various tints with gold and silver ornaments and can be supplied for most of our sizes and models.

OPEN FACE AND SKYLIGHT DIALS

<p>O Size</p> <p>Full Open Face</p>	<p>O Size Skylight</p> <p>3/4 Opening</p>	<p>O Size Skylight</p> <p>Regular Opening</p>	<p>5/0 Size</p> <p>Full Open Face</p>	
<p>5/0 Size Skylight</p> <p>3/4 Opening</p>	<p>5/0 Size Skylight</p> <p>Regular Opening</p>	<p>10/0 Size</p> <p>Full Open Face</p>	<p>10/0 Size Skylight</p> <p>3/4 Opening</p>	<p>10/0 Size Skylight</p> <p>Regular Opening</p>

When ordering open face dials without second bits specify "Full Open Face."

When ordering skylight dials specify whether they are to be used in cases having regular opening or 3/4 opening.

Always state size and model of watch for which dial is wanted, and if there is any doubt give the number of movement.

When ordering dials for wrist watches specify, in addition to model and number of movement, whether they are to be used in regular bracelet or convertible cases.

3/0 SIZE DIALS

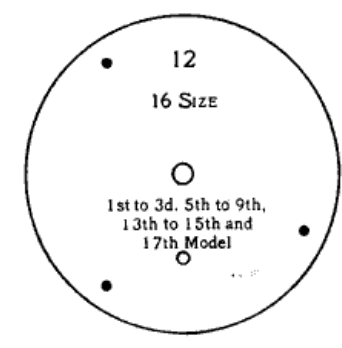

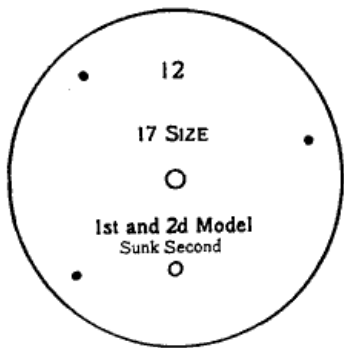

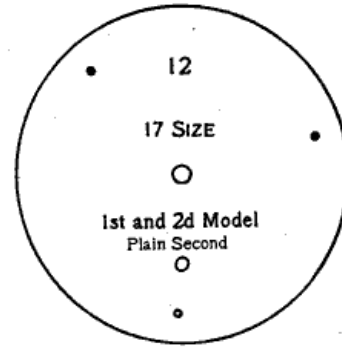

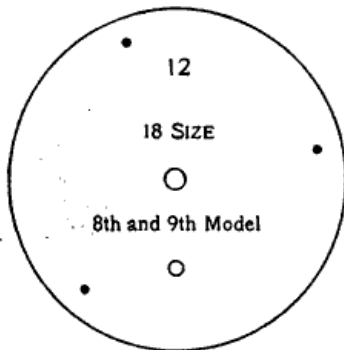

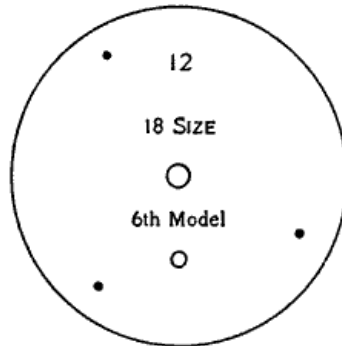

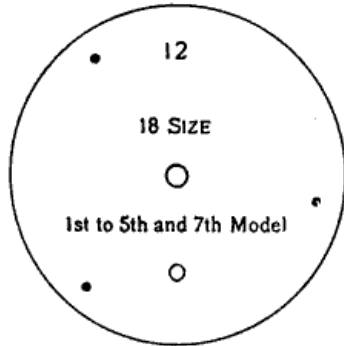

3/0 size dials are 1.03 inches in diameter.

When made skylight "Regular Opening" the opening is the same as on O size skylight "Regular Opening."

When made skylight "3/4 opening" the painting is the same as on 5/0s "Full Open Face."

LOCATION OF DIAL FEET

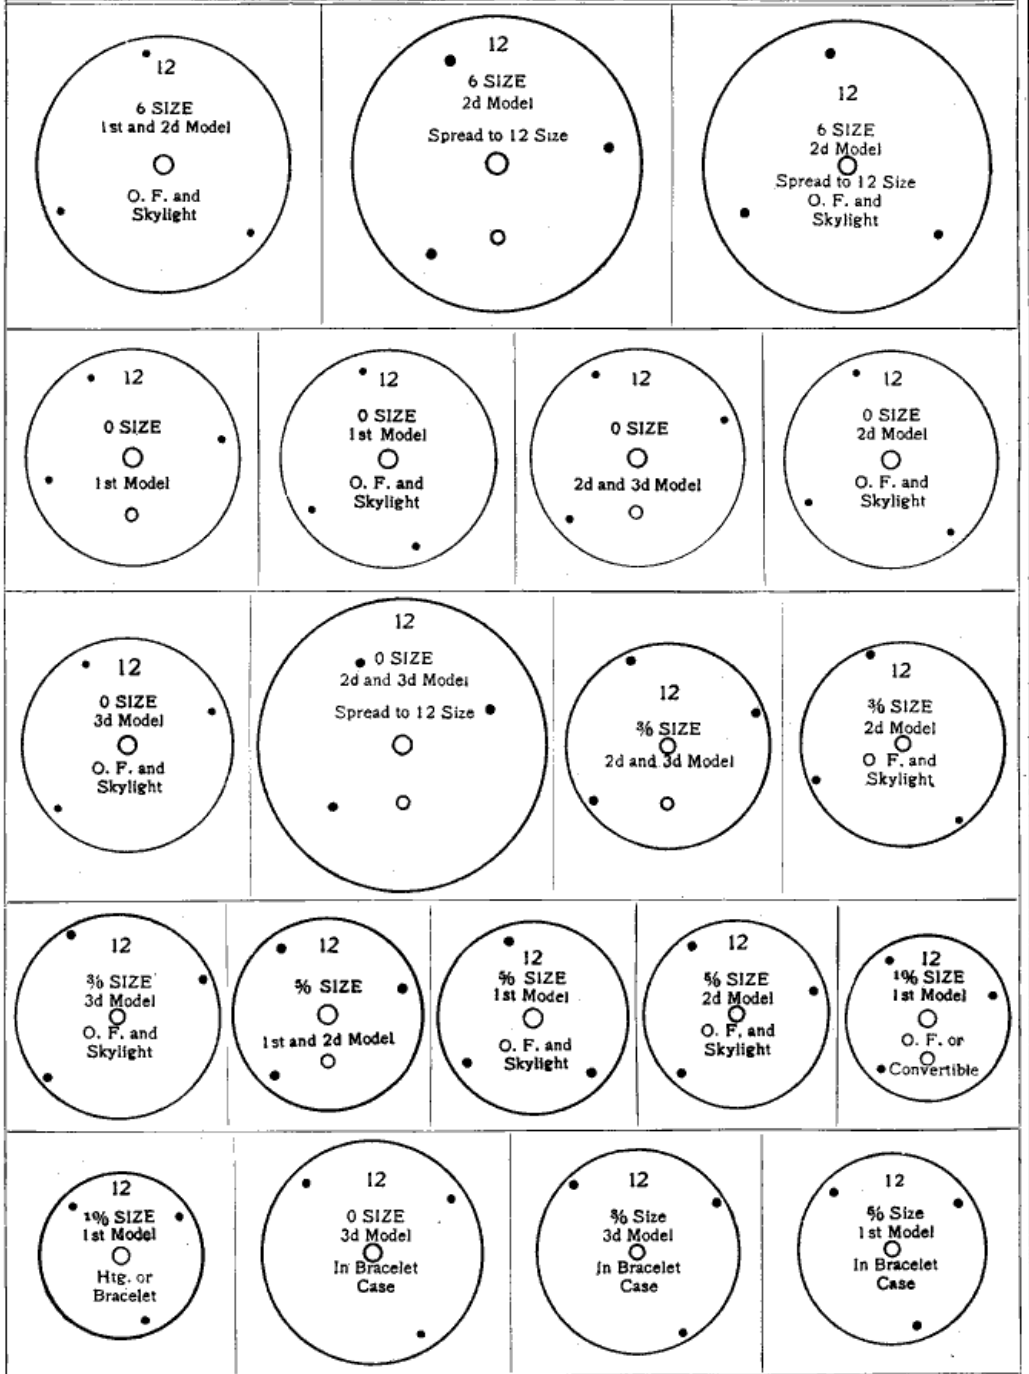

On account of the feet on Dials of the several Models being located in different positions, it has been thought advisable to illustrate the place they occupy as relates the twelfth hour in the various sizes and styles.

The method of jewelling our movements enables you to replace a Jewel and retain the same "Endshake" as originally. The shoulders on the settings are cut the same for both upper and lower jewels, the variation in length of pivots being taken up in the depth of recess cut in the top pieces.

All Jewels in settings are supplied shouldered and the prices quoted are for finished settings.

All Jewels in settings are supplied shouldered and the prices quoted are for finished settings.

Should train Jewels with unfinished settings be required the price will be \$1.00 per dozen less than list for composition and \$2.00 per dozen less than list for gold.

All orders will be filled with flat or flush settings, unless it is stated that raised settings are wanted, the price being the same.

The method of jeweling our movements enables you to replace a Jewel and retain the same "Endshake" as originally. The shoulders on the settings are cut the same for both upper and lower jewels, the variation in length of pivots being taken up in the depth of recess cut in the top pieces.

All Jewels in settings are supplied shouldered and the prices quoted are for finished settings.

The settings of Train and Cap jewels are cupped and polished.

Under the head "settings" the extreme diameter of setting is given in thousandths part of an inch.

All orders will be filled with flat or flush settings, unless it is stated that raised settings are wanted, the price being the same.

Unless Unfinished settings are mentioned finished will be sent.

Should train jewels with unfinished settings be required the price will be \$1.00 per dozen less than list for composition and \$2.00 per dozen less than list for gold.

Garnet pins numbers 559—18 and 16 sizes; 570—14, 12, 10 and 6 sizes; 571—0 size and 2150—10/0 size are suitable for use with single rollers. They are furnished in assorted diameters and are the numbers of pins most commonly used.

Garnet pins No. 559 L are longer than No. 559 and are suitable for 18 and 16 size watches made prior to 2,000,000.

Roller jewels used with double roller (table and safety roller separate) and with combination rollers (table and safety roller combined) require shorter pins than single rollers.

D, affixed to a number indicates pins for double roller and C for combination roller.

There is considerable variation in the diameter of jewel pins used in the same grade of movements. In filling orders assorted diameters will be supplied.

We are also prepared to supply pins in separate diameters from 28 to 60 hundredths of a millimeter suitable for assortments.

See pages 132 and 134 for jewel pin assortments.

The letters affixed to the numbers of pallet stones indicate the material from which stones are made. G is garnet, R ruby and S sapphire. In ordering specify catalogue number, style (New or Old) and price. Two thicknesses of garnet pallet stones have been used in the several sizes of watches taking Nos. 546G and 556G. The thin stones are known as New Style and the thick as Old Style. In filling orders, unless Old Style is mentioned, the New Style will be sent.

THICKNESS OF PALLET STONES

In Thousandths of an Inch and Equivalent Thickness in Millimeters

	Inches	Millimeters
18 and 16 Old Style (thick)	.0168	.4267

*The first 18 Size Stem-Wind Movements used Setting Lever No. 26.

†Catalogue No. 83 and No. 125 are made both 14 and 16 Size, and No. 99 and No. 144, 6 and 8 size; therefore it is necessary to specify the size, in addition to Catalogue Number and Class; and if not positive as to Size give Number of Movement.

To ascertain Grade and Class of movement refer to numbers in the back of the catalogue under the head of "Number and Grade with classification and description of movements."

Orders for less than one-fourth dozen pieces of a kind will be charged at the single piece price.

It will be observed that in some instances more than one number is applied to the same illustration. The reason for this is that a difference exists which cannot be shown by an illustration. This difference is usually explained in the description following the catalogue number.

Read the introduction page carefully as it explains fully our system of cataloguing.

*Two different forms of Bevel Pinions have been used in these Classes, and pains should be taken to compare part wanted with Illustrations before ordering.
 † The difference between 1851 and 1455 is in the size of the hole, the 1455 having the smaller hole.

Among the Movements Classed as 16 Size, First Model, several have been made 14 Size; and of the 6 Size, First Model, several have been made 8 Size; therefore in ordering Bevel Pinions for these Models be particular to state Size in addition to Catalogue Number and Class.

*Used in connection with Safety Roller in Double Roller Escapement.

S, affixed to numbers 2068 and 2432, indicates Sapphire Jewel.

Standard diameters of Single Roller Tables are as follows:

Inches	Millimeters
18 and 16 Size .150	3.81
12 and 6 Size .124	3.15
0 Size .100	2.54
10/0 Size .068	1.73

In addition to rollers of standard diameter we use and are prepared to furnish for repairs rollers of larger and smaller diameter than standard.

This system makes it possible to get the correct safety action without bending the guard pin.

In ordering other than standard rollers specify whether small or large are wanted in addition to catalogue number.

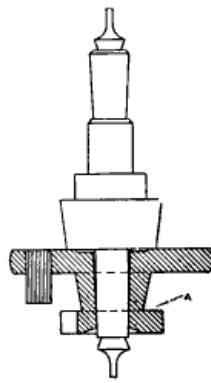

The standard diameter of hole in roller No. 749 is .024 inches (.60 mm.). In some of the earlier 16 size movements (those made prior to No. 2,000,000) rollers with .020 inches (.50 mm.) holes were used.

If those having small holes are required specify "small holes" in addition to catalogue number.

Combination Type of Double Roller

A combination roller consists of the table and safety rollers permanently fitted together. The illustration to the left represents this type of roller fitted to a staff.

In removing combination rollers from the staff place the jaws of the roller remover under the shoulder "A" at right angles to the crescent.

"A" is the table roller and "B" the safety roller located in their correct positions on the staff.

Owing to the fact that in many instances difficulty is experienced by the trade in applying regulators to our 12 size 2d and 3d models of watches, special attention is called to the location of the index on these two models. It will be observed that the index is not on the cock, but on the train bridge. When the regulator is placed in this position the pins will be in the correct place.

LARGE SIZE SCREWS.

It sometimes happens where screws have to be removed and replaced a number of times, the thread in plate becomes worn so that the screws overturn; to take care of such instances we make screws that are slightly larger than regular size which are known as Large. These will be supplied at the same price as standard screws. In ordering specify "Large" in addition to catalogue number and letter.

EXTRA LARGE SIZE SCREWS.

For use in instances where the thread has been entirely stripped from plate we make Extra Large Size screws. Before using these screws it is necessary to retap the stripped hole. In ordering specify "Extra Large" in addition to catalogue number and letter.

Taps for "Extra Large Size" screws will be supplied at 10 cents each or \$1.00 per dozen.

GOLD PLATED SCREWS.

We can supply Gold Plated Steel screws in A, C or G quality at 10 cents per dozen additional to list price. In ordering specify Gold Plated in addition to number and letter.

ASSORTED SCREWS.

For assorted screws see page No. 132.

TIMING SCREWS.

For the benefit of watchmakers who are called on to replace Breguet hair springs in our movements and who find difficulty in bringing them "to time" within the limits of the regulator, owing to the new spring being too strong or weak, as the case may be, we are putting up assortments of Timing Screws for this purpose, which we believe will prove of great assistance to the trade in quickly correcting the error—by the addition or substitution of a pair of these screws.

Each assortment of composition screws contains fifty pairs, while an assortment of gold has twenty-five pairs, consisting of six different weights or values suitable for movements of one size, the various weights being placed in separate boxes, properly labeled, giving the effect a pair should have on the balance for each hour run. These six boxes are enclosed in a larger one, thus making a very convenient package. See page 132 for description and prices.

INSTRUCTIONS FOR USING TIMING SCREWS

If, on placing the regulator in the center of the index, it is found, on running the movement one hour, that it gains a certain number of seconds, then a pair of timing screws should be selected of suitable weight or value to overcome the error and placed in the balance *directly opposite one another*. This should bring the movement to time or within the limits of the regulator.

On again running the movement, if it is found that it loses, then remove a pair of the regular or full size balance screws from the balance (being careful that they be taken from positions *directly opposite each other*) and run the movement with the balance in this condition, when it will undoubtedly be found that it gains; in which case, by again selecting a pair of timing screws of the desired weight to correct such condition and placing them in the balance, in the same position from which the pair were removed, no difficulty should be had in correcting any slight error which may now appear, by the aid of the regulator. *After changes are made see that the balance is poised.*

WATCH SCREW TAPS

The table below gives all of the standard taps used in connection with the screws listed on the preceding pages.

The diameter in thousandths of an inch and number of threads per inch are marked on the handle of each tap as shown in the illustration.

(Twice actual size)

Observe that several different numbers of screws are the same as relates the diameter and number of threads per inch, thus requiring a comparatively small number of taps to embody the entire line.
 "L" affixed to a tap number indicates a left-hand thread.

* Slow train.

Your Jobber will supply Hair Springs done up separately in trade marked papers, printed with Strength and Number as shown by illustration below.

IMPORTANT

We particularly call your attention to Hair Spring notes on page 101.

In ordering Hair Springs be sure and specify Number and Strength.

The table on the following pages will be found very convenient for selecting Number and Strength of spring for most grades.

Flat Hair Springs are not supplied with studs fitted.

SPRINGS, HAIR, BREGUET.

Table below gives Grades with Number and Strength of Spring Required.

IMPORTANT

Our system of classifying Hair Springs has been changed for the following reasons: We have at various times made changes in the several sizes of Balances which have altered their weight, and consequently the strengths of Hair Springs have been changed accordingly; so much so that the Balance which we originally used in our "Class 1" movements took the same strength spring as those we are now using in "Class 6" movements, and in order to assist the trade in procuring suitable Hair Springs, we have adopted the following system:

Taking as a standard the heaviest Balance we make of a given size we vibrate a suitable spring to it, which spring is known as Strength 1; for the next lighter Balance, of course taking a lighter spring, the strength is known as Strength 2. In each case the lowest strength number represents the strongest spring, and the highest number the weakest spring.

Having abandoned "classes" as relates to Hair Springs, if the Number of Movement is given for which spring is wanted, it will be of assistance to us in selecting one of proper strength, although the only sure way of getting a suitable Breguet Hair Spring for any special movement is to send us the Balance, that we may vibrate a spring to it; this does not necessarily apply to Flat Springs, although better results would be obtained should these instructions be followed.

TIMING SCREWS

In case difficulty is experienced in bringing a new Hair Spring "to time" within the limits of the Regulator, owing to the spring's being too strong or weak (as the case may be), we are putting up assortments of Timing Screws for this purpose which will prove of great assistance in quickly correcting the error, by the addition or subtraction of a pair of these screws; a full description and instructions for their use will be found in its appropriate place under "Screws."

extra light, P103 SPRINGS, MAIN

Size	Catalogue No.	Width in Thousandths of an Inch	Thickness in Thousandths of an Inch	Width in Millimeters	Thickness in Millimeters	Suitable for	Models used in

EXTRA LIGHT MAIN SPRINGS

In some instances standard strength springs for any grade movement may give the Balance too much motion.

To take care of such instances we are prepared to supply Extra Light Springs. In ordering these springs give the catalogue number and specify Extra Light.

We carry these springs in stock in the following numbers and strengths and will supply other numbers to order

Size	Catalogue No.	Width in Thousandths of an Inch	Thickness in Thousandths of an Inch	Width in Millimeters	Thickness in Millimeters
18	812	.115	.00825	2.92	.209
16	817	.104	.00725	2.64	.184
14	2339	.081	.0075	2.05	.190
12	1720	.088	.00725	2.23	.184
12	2874	.065	.007	1.65	.177
0	825	.050	.006	1.27	.152
0	1713	.065	.00525	1.65	.133
0	2097	.065	.00525	1.65	.133
5/0	2705	.050	.005	1.27	.127

Should still lighter springs be required specify strength desired in thousandths of an inch or hundredths of a millimeter.

IMPORTANT BALANCE STAFF INFORMATION

18 SIZE NUMBER 857

No. 857 are made in two lengths and with short and long hubs. The short Staffs are known as Old Style and the long as New Style.

In ordering these Staffs specify style wanted. O. S. H. affixed to 857 means Old Style Short Hub. O. L. H. Old Style Long Hub—N. S. H. New Style Short Hub.

The style most commonly used is New Style Long Hub and when these are wanted order No. 857.

16 SIZE NUMBER 861

No. 861 are made in two lengths and with Large and Small Roller Arbor. The short are known as Old Style and the long as New Style.

In ordering these Staffs if Old Style are wanted affix the letter O to No. 861 and if Old Style Small Roller Arbor are wanted, specify No. 861 O. S. R. A. The Staffs most used in this number are New Style Large Roller Arbor and if these are wanted specify No. 861.

Small Roller Arbors are .208 of an inch or .53 of a M. M. in diameter and large are .248 of an inch or .63 M. M. measured immediately below hub.

12 SIZE NUMBER 1905

No. 1905 are made with two lengths of hubs; if the short hubs are required specify No. 1905 S. The long hub Staffs are most used in this number and when these are wanted specify No. 1905.

6 SIZE NUMBER 868

No. 868 are made in two lengths, the Old Style being the longer.

In ordering Old Style specify Number 868 O. The Staffs most used in this number are New Style and when these are wanted specify No. 868.

OLD STYLE STAFFS

Nos. 857, 861 and 868 Old Style were used in most watches made prior to 3,000,000.

LONG HUB STAFFS

The length of hubs in some numbers of Staffs were increased to bring the roller nearer the Fork, allowing the use of shorter Jewel Pins thereby reducing the liability of Jewel Pin breakage.

ABOUT PIVOT SIZES

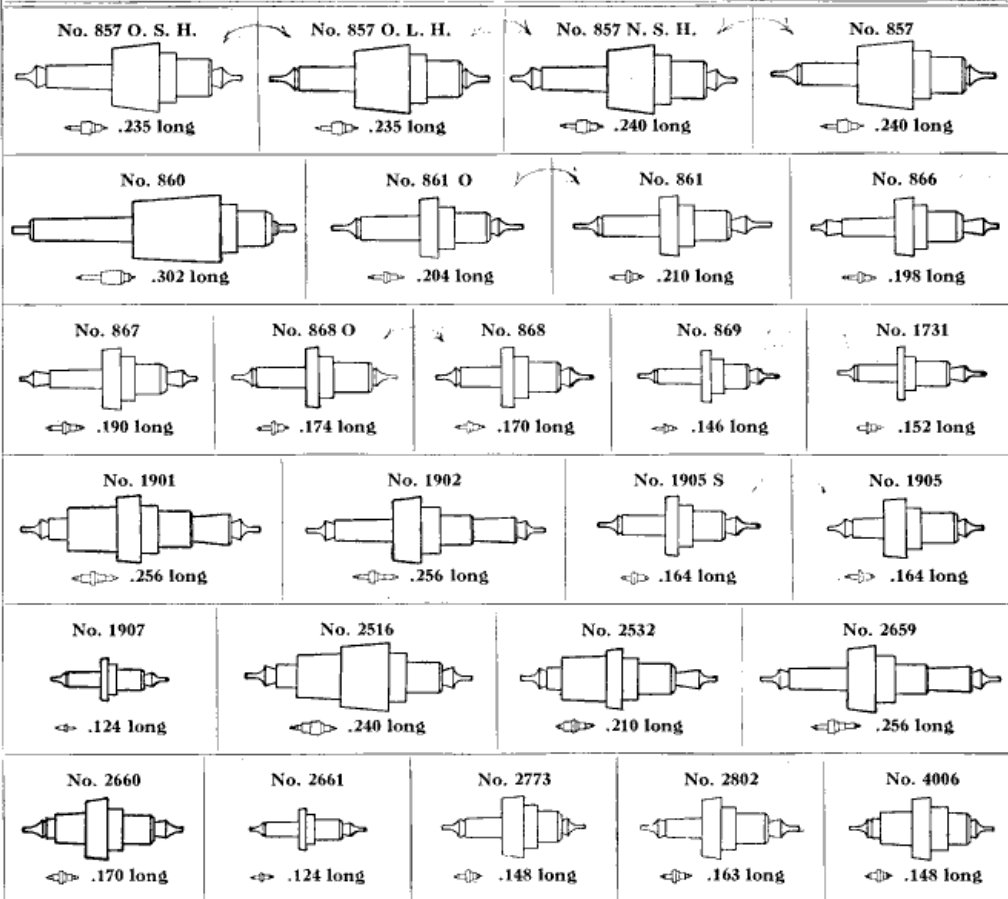

We send out Staffs with assorted size pivots unless otherwise ordered.

We carry in stock a line of Staffs with gauged pivots which we supply on request.

In ordering gauged Staffs specify size of pivot wanted in hundredths of a M. M. in addition to catalogue number and class.

ASSORTMENTS

Our gauged Staffs and Jewels put up in assortments are very convenient and will save time in making selections. They are listed on Pages 132 to 135.

Illustrations of Balance Staffs are shown in two sizes so that any peculiarity in shape may be more easily discerned. The smaller illustration is actual size and the larger five times actual size. The figures under each illustration represent the total length of Staff in thousandths of an inch.

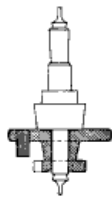

To assist in determining the proper Staff, measure total length of Staff to be replaced and compare with the measurements given under the illustrations in thousandths of an inch.

TABLE OF BALANCE STAFF LENGTHS

Showing the Lengths in Thousandths of an Inch and Equivalent Lengths in Millimeters

Inches	Millimeters	Inches	Millimeters
.124	3.15	.190	4.83
.146	3.71	.198	5.03
.148	3.76	.204	5.18
.152	3.86	.210	5.33
.163	4.14	.235	5.97
.164	4.17	.240	6.10
.170	4.32	.256	6.50
.174	4.42	.302	7.67

DOUBLE ROLLER BALANCE STAFFS

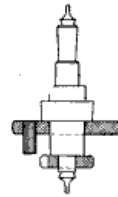

The Balance Staffs used only in connection with the combination type of Double Roller are Nos. 2659, 2661, 2773, 2802.

It will be observed that in several instances the same Staff is used in connection with both Single Rollers and Combination Type of Double Rollers. These Staffs are Nos. 857, 1902, 861 and 869.

DOUBLE ROLLER BALANCE STAFFS

The Balance Staffs used in connection with the two piece type of Double Roller are Nos. 1901, 2516, 2532, 2660, 4006.

It will be observed that these Staffs have an extra shoulder for the Safety Roller.

The Wheel Shoulder on most Center Staffs is D shaped, and fits a corresponding hole in the Center Wheel. The two pieces are held together by screwing on the Center Pinion, between which and the Wheel a thin steel Washer is placed.

In a number of instances the Center Staff and Center Pinion are in one piece. If a combination of this kind is required it will be found listed under the head of Center Pinions.

On Old Style Center Staffs the Center Pinion is held in position with a Center Pinion Nut. The New Style, the Center Pinion is screwed on Staff.

To ascertain Grade and Class of movement refer to numbers in the back of the catalogue under the head of "Number and Grade with classification and description of movements." To find where the particular kind of material required is listed, refer to the index, which will be found on the last pages of this catalogue.

To ascertain Grade and Class of movement refer to numbers in the back of the catalogue under the head of "Number and Grade with classification and description of movements." To find where the particular kind of material required is listed, refer to the index which will be found on the last pages of this catalogue.

Read the introduction page carefully as it explains fully our system of cataloguing.

Orders for less than one-fourth dozen pieces of a kind will be charged at the piece price.

WASHERS, MAIN SCREW

Used on Exposed Winding Wheel Models

Owing to the many different styles of finish on the main screw washers and ratchet wheel washers of our exposed winding wheel models, it has become necessary to abandon the previous system of classifying them. We now list them in four general divisions. In each of these divisions are noted the chief features of the finishes embraced by them which serves in a general way as a guide for ordering.

*Used with solid Center Pinion, to be staked on.

Observe that 18 Size Movements are made both Quick and Slow Train.

The hole in most Center Wheels is D shaped and fits a corresponding shoulder on Center Staff. The two pieces are held together by screwing on the Center Pinion, between which and the Wheel a thin steel Washer is placed.

To ascertain Grade of Movement, consult Index. In ordering Material, give Catalogue Number and Class, or Number of Movement for which same is required.

WHEELS, MAIN

Used with Exposed Winding Wheels

Owing to the many different styles of finish on the main wheels of our exposed winding wheel models, it has become necessary to abandon the previous system of classifying them. We now list them in four general divisions. In each of these divisions are noted the chief features of the finishes embraced by them which serves in a general way as a guide for ordering.

Catalogue No.	PRICE		DESCRIPTION OF MOVEMENT		Teeth	In ordering specify letter in addition to catalogue number
	Piece	Per Doz.	Size	Model

In ordering main wheels for watches having exposed winding wheels give catalogue number and letter.

To assure receiving main wheels with the same finish as the original, send sample.

The several kinds of main wheel finishes described are not made for all sizes and models.

Only such finishes as have been used in a particular model and grade can be supplied for that grade.

Read the introduction page carefully, as it explains fully our system of cataloguing.

Orders for less than one-fourth dozen pieces of a kind will be charged for at the single-piece price.

For ratchet wheels used on models having exposed winding wheels see the following page.

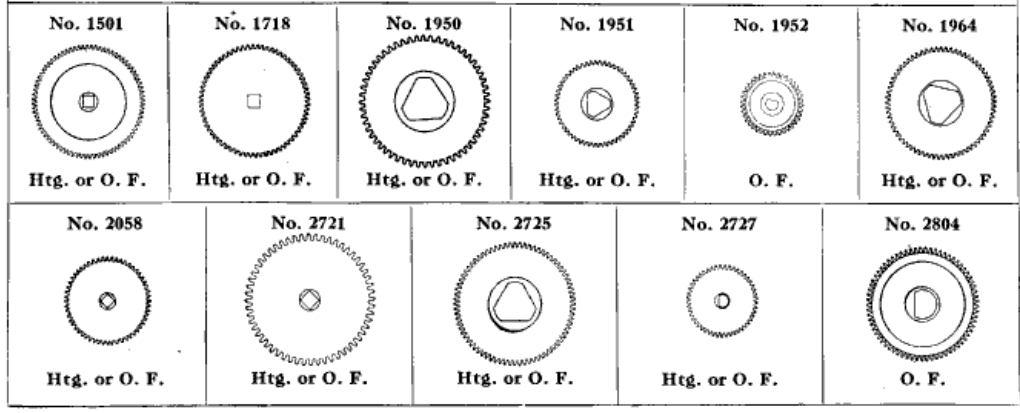

WHEELS, RATCHET

Used on Models having Exposed Winding Wheels

Owing to the many different styles of finish on the ratchet wheels of our exposed winding wheel models, it has become necessary to abandon the previous system of classifying them. We now list them in four general divisions. In each of these divisions are noted the chief features of the finishes embraced by them which serves in a general way as a guide for ordering.

PARTS OF PLATES

Prices furnished on application.

When a new plate or parts, such as Barrel Bridges, Train Bridges, Top Plates, Cocks or Pallet Bridges are wanted, the lower plate, the piece to be replaced, together with the material to be used in connection with the new part, should be sent in. This will enable us to fit the new piece to the lower plate, upright and jewel correctly, also to furnish new piece finished with same pattern of damaskeening as on old one.

Always give the movement number in ordering parts of plates. Do not send in a complete watch when a part is wanted. We cannot make partial repairs on a complete watch and guarantee that the watch will perform satisfactorily. If the complete watch is sent it will be handled as a repair job and a charge made for putting the watch in order.

18 SIZE WINDING INDICATOR

This feature is applied to grade 240, 18 size $\frac{3}{4}$ Plate O. F., nickel, 8th model, lever set, 19 jewels.

A cross section of the 18 size Winding Indicator feature is shown on the opposite page.

TABLES

Showing the comparative values of the standards of measurements commonly used by watchmakers.

One Douzleme.....	= .0074 inches.
One Millimeter.....	= .03937 inches.
One Ligne.....	= .0888 inches.
One Ligne.....	= 2.256 M. M.

WATCH SIZES

The Lancashire Gauge for determining watch sizes is of English origin and is the standard commonly used by watch manufacturers of the United States. By this system one inch was taken as a basing figure and to this was added $\frac{5}{30}$ of an inch for fall or drop. English made watches were usually hinged, swinging in the case similar to the swing ring in modern swing ring cases. The top plate was made enough smaller than the pillar plate to permit the movement falling or dropping into position without coming in contact with the case center. Thus 1 and $\frac{5}{30}$ of an inch was called naught size and every additional $\frac{1}{30}$ of an inch added to this formed a size. Conversely, each subtraction of $\frac{1}{30}$ of an inch from the base also forms a size smaller than naught size.

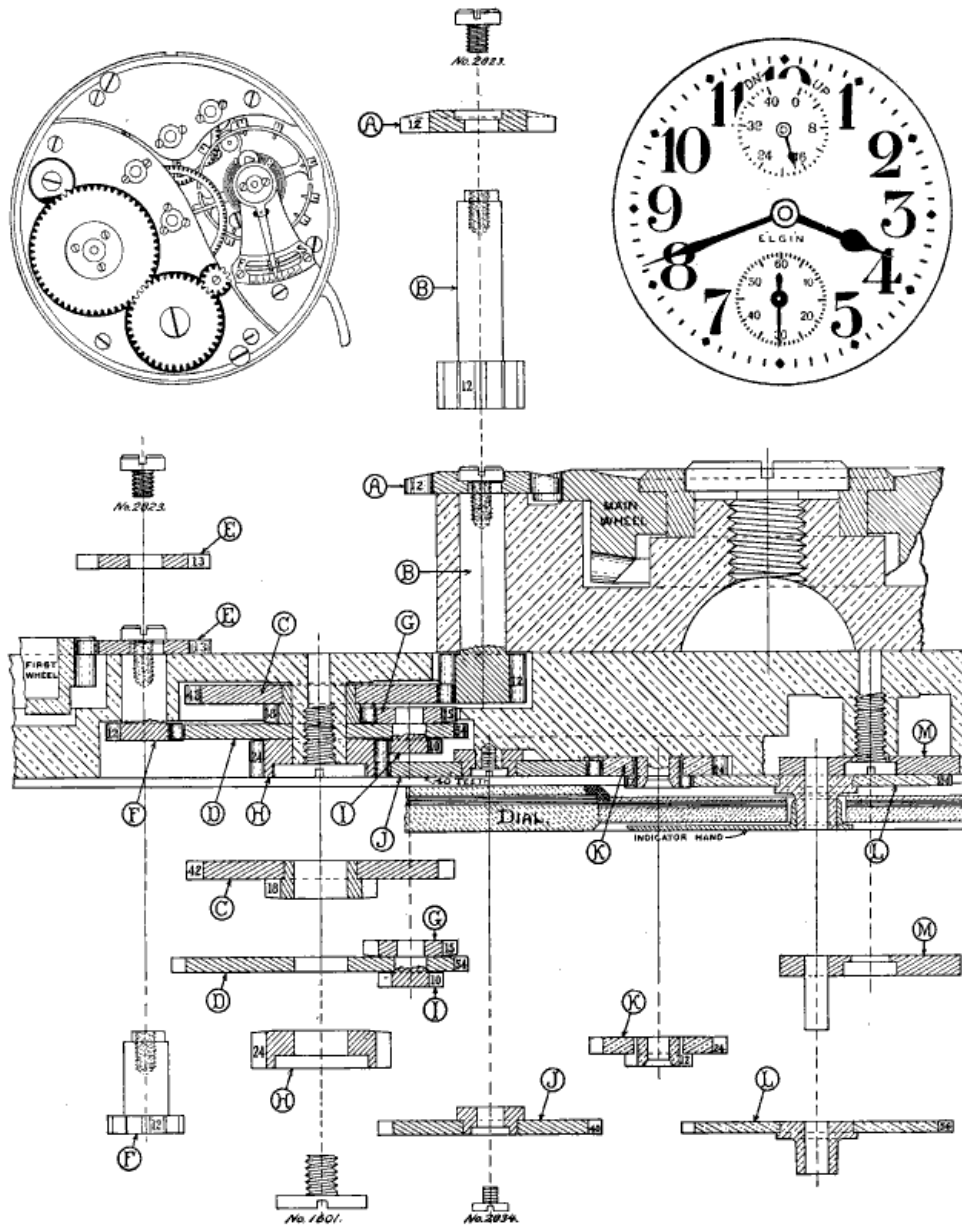

Below is given a table showing watch sizes from 15/0 size to 20 size by inches — also their equivalent sizes in millimeters.

Size	Inches	Inches	Millimeters	Size	Inches	Inches	Millimeters
15/0	21/30	.700	17.78	4	1 9/30	1.300	33.02

18 SIZE WINDING INDICATOR

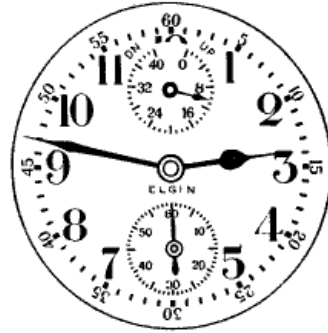

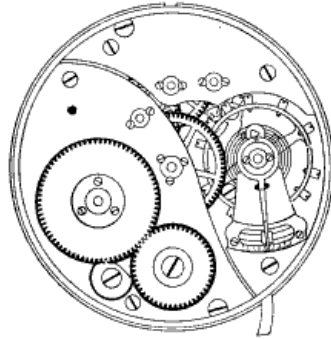

Below is shown a cross section of the winding indicator feature as applied to the 18s $\frac{3}{4}$ plate Open Face watches, also illustrations of the front and back of a watch having this feature.

The several pieces are shown in position, also separately, and are lettered in order that they may be readily identified. The small numbers appearing on the various wheels and pinions indicate the number of teeth.

16 SIZE WINDING INDICATOR

The Winding Indicator feature as applied to 16s 3/4 Plate Open Face watches is shown in cross section on the opposite page. Below is shown the front and back views of a watch having this feature.

The positions of the several pieces is indicated and they are also shown separately with identifying letters in order that they may be readily selected. The number of teeth in the various wheels and pinions are marked on them.

This feature is applied to Grades 372, 374 and 391, all of which are 16s 3/4 Plate, Nickel, 15th model, lever setting watches.

ASSORTED MATERIAL

ASSORTMENTS

Gauged Balance Staffs, Balance Hole Jewels and Roller Jewels

In making up these assortments it has been our aim to supply lines of material which will be most useful to the trade and put it up so conveniently that selections may be quickly made.

The cabinets are of Mahogany, substantially made, and will last a lifetime.

No. 2900 comprises a line of Balance Staffs suitable for 7-jewel grades.

No. 2901 is made up of first quality Ruby Balance Jewels. Every Jewel is carefully examined and the holes are properly proportioned and highly finished.

No. 2902 is arranged particularly for Railroad and other fine grades and Railroad Time Inspectors will find this a most useful assortment.

No. 2903 is made up with polished staffs without oil grooves and is suitable for both 7 and 15 jewel grades.

No. 2904 will be found a very satisfactory assortment of Staffs and Jewels with holes to suit and is made up to meet the requirements of dealers who do not care to invest in the larger assortments.

No. 2905 is made up of 28 diameters of roller Jewels which makes a most complete variety. A Fork slot gauge is supplied with each assortment, and gauging forks and selecting jewels in accordance to directions will prove a saving of time and material. It is the method which has been in use in our factory for many years.

No. 2906 is a very complete and useful assortment of Balance Staffs and Balance Hole jewels.

No. 2907 is a good assortment of Balance Staffs for 7-jewel grades.
